

Sebastian Paulus

Senior Android Software Developer

I'm an experienced Android developer knowing Kotlin and Java and developing Android applications for more than 10 years. When I'm not coding, I support our backend teams in designing RESTful APIs suitable for all our client applications. I'm experienced using GIT for version control and familiar with JIRA for bug tracking. My preferred way of working is the agile one and so I'm experienced in Scrum.

Besides the technical side I also enjoy supporting our product manager in developing new features for our apps. For this I try to provide input about platform capabilities or about the technical challenges related to new product ideas.

In my team I'm the technical lead and thus responsible for a future proof and maintainable Android application. I'm always eager to keep up-to-date with new things in Android and Kotlin. Last but not least I'm supporting my team manager in recruiting too to build a well balanced team.

Work History

2011-10 -

Current
